

► **Healthier Landscape**

Proven to be superior in real-world conditions with uniform coverage and large, wind-resistant droplets. HE-VAN raises water efficiency and produces healthy, consistent landscapes.

► **Shorter Run Times**

High efficiency HE-VAN nozzles allow you to shorten your sprinkler run times by up to 35%.

► **Exclusive ExactEdge™ Adjustment**

Produces a clean spray pattern edge with an adjustment mechanism you can feel "click" and less overthrow on hardscapes.

HE-VAN Series Nozzles

High Efficiency Variable Arc Nozzles

With patent pending Flow Control Technology, Rain Bird HE-VAN nozzles offer even coverage throughout the spray pattern delivering a healthy, beautiful landscape. Gentle close-in watering eliminates dry spots around the spray head. HE-VAN nozzles also generate large wind-resistant water droplets that prevent misting and airborne evaporation so the right amount of water is delivered to the right place.

The high efficiency of the HE-VAN nozzle allows you to shorten your sprinkler run times by up to 35%, saving you water and money. Even coverage makes them the perfect choice for homeowners looking to save water and prevent brown spots. This is why HE-VAN nozzles won the Irrigation Association's "Best New Product" award in 2011.

HE-VAN Series Nozzles

More Uniform Coverage

- Patent-pending Flow Control Technology delivers even coverage throughout the radius and consistent, healthy turf.
- Greater than a 70 percent average DU_{LQ} —more than a 40 percent improvement over existing variable arc nozzles.
- Gentle close-in watering eliminates dry spots around the spray head.

Superior Wind Resistance

- HE-VAN's low-trajectory spray keeps streams below prevailing winds and maximizes water landing in the target zone.
- Large water droplets offer greater wind resistance, saving water no matter the weather conditions.
- HE-VAN can be paired with Rain Bird's pressure regulating 1800 series spray heads (PRS) to dramatically reduce misting and airborne evaporation at high pressures.

Shorter Run Times

- Dramatically reduce zone run times compared to competitive nozzles, helping you stay within tight watering windows.
- Less run time means less water and that equals significant savings for customers.

Rain Bird® HE-VAN

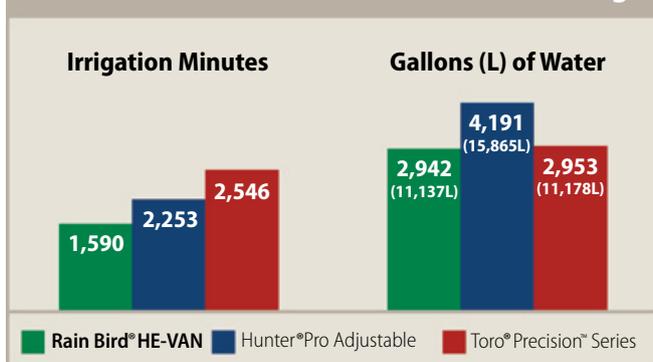

Hunter® Pro Adjustable

Toro® Precision™ Series

Estimated Annual Run Time and Water Usage

Maximum Flexibility

- Full adjustability from 0° to 360° saves time and means fewer nozzles to stock.
- 8' (2.4m), 10' (3.0m), 12' (3.7m) and 15' (4.6m) models with up to 25% radius reduction for a wide variety of landscape applications.
- Matched precipitation rates allow you to install Rain Bird® HE-VAN, MPR and U-Series Nozzles on the same zone.
